How to make a live photo as your wallpaper. How to make a live photo play as wallpaper. How to make a live photo have sound as a wallpaper.

By MacRumors Staff on December 11, 2019Jump to How Tos ArticlesLive Photos are a feature introduced with the iPhone 6s and the iPhone 6s Plus, designed to add life and vitality to the standard still photo. When capturing a picture, the Live Photo feature captures an extra 1.5 seconds before and after a shot, with the footage being used to animate the photo with movement and sound. Live Photos can only be created on an iPhone 6s or later, but they can be viewed on iOS devices that run iOS 9 or later, Apple Watches that run watchOS 2 or later, and Macs that run OS X El Capitan or later. On non-supported devices, Live Photos appear as standard JPGs. As of iOS 11, Live Photos now support effects to turn them into video loops, bounce back and forth to instantly play in reverse, and long exposure to capture time and movement in a still photo.Monday February 5, 2018 11:54 am PST by Juli CloverApple's Live Photos, introduced in 2015, are photos that capture 1.5 seconds of video before and after you take a picture, with the aim of adding a little bit of life and movement to still images. When you take a photo with an iPhone, not every shot comes out crisp and clear, but with Live Photos, if you get a blurry image, you can open it up and see if other frames you captured are clearer. ...Monday September 25, 2017 2:09 pm PDT by Juli CloveriOS 11 and macOS High Sierra bring Live Photos to FaceTime, allowing you to preserve a special memory while video chatting with friends and family. Whenever you use the new Camera button that's at the bottom of the screen on a FaceTime call, it captures a photo, but don't worry - this can't be done in secret and the other party is always notified when an image is captured. How to Take a Live ...Friday September 22, 2017 12:59 pm PDT by Mitchel BroussardApple originally debuted Live Photos in 2015, alongside the iPhone 6s and iPhone 6s Plus, marking it as a feature that enhances the smartphone's photography with pictures that move when a user performs a 3D Touch on them. With the launch of iOS 11, Live Photos can now be edited in a few useful ways, and this guide will help you make a new key photo (which shows up first in your Photo Album), as...Thursday November 12, 2015 1:15 pm PST by Lory GilApple originally debuted Live Photos for iPhones in 2015, touting them as an enhanced mode of photography that lets you take pictures which move when you press on them. Since then, Live Photos have become a standard feature available on iPhones and most iPads, and Apple has added some extra tricks in successive versions of iOS. Basically, a Live Photo is a combination of a video clip and a...Wednesday December 11, 2019 1:34 pm PST by Juli CloverTwitter today announced support for Apple's Live Photos, which can now be uploaded to Twitter and shared as GIFs. Apple first introduced Live Photos in 2015 alongside the iPhone 6s and 6s Plus, though most social networks still do not support the format and do not allow Live Photos to play when uploaded. Live Photos are designed to add movement to still photos to bring them to life, ...Friday March 17, 2017 6:41 am PDT by Mitchel BroussardLast year Google launched an app called Motion Stills that fixed a lot of issues that users had -- and still have -- with Apple's new Live Photos feature introduced in the iPhone 6s and iPhone 6s Plus. With the new update, Motion Stills now lets users customize the displayed frame that appears automatically in the camera roll of the iOS Photos app. The intent is to display more clearly what...Wednesday September 21, 2016 3:03 am PDT by Tim HardwickBlogging site Tumblr has announced web support for Live Photos, the animated image format Apple introduced with the iPhone 6s and 6s Plus. Now when visitors to a Tumblr-hosted site see the concentric circles in the top-left of an image, they can click and hold on the picture to play it, audio included. "That's right! Live Photos work on the web now," reads the company's announcement....Thursday June 9, 2016 3:39 pm PDT by Juli CloverEarlier this week, Google released a new app called Motion Stills, designed to turn Live Photos captured with the iPhone 6s, iPhone 6s Plus, and iPhone SE into GIFs or videos. Over the past couple of days, we spent some hands-on time with Motion Stills, and have been really impressed with the way it transforms Live Photos into a more useful, shareable medium. Motion Stills isn't just an app...Tuesday June 7, 2016 11:49 am PDT by Juli CloverGoogle today announced the launch of a new app called Motion Stills, which is designed to create unique GIFs from Live Photo images captured with the iPhone 6s, iPhone 6s Plus, and iPhone SE. According to Google, the app was built by the Google Research Team and uses the company's video stabilization technology to freeze the background into a still photo or create cinematic panoramas. Multiple ...Thursday January 14, 2016 3:04 pm PST by Juli CloverAlongside the iOS 9.3 beta seeded to developers earlier this week, Apple also provided an OS X 10.11.4 beta with some minor updates to the OS X El Capitan operating system. OS X 10.11.4 was overshadowed by all of the features introduced in iOS 9.3 so it's taken a few days for people to dig into the release to find out what's new. One of the new additions to OS X 10.11.4 is improved Live Photos ...Monday December 21, 2015 9:49 am PST by Juli CloverStarting today, some Facebook users will be able to view Live Photos in their Facebook feeds using the Facebook for iOS app, reports TechCrunch. Introduced with the iPhone 6s and the iPhone 6s Plus, Live Photos are motion-enabled images that capture the moments just before and after a photo is taken. Facebook plans to gradually roll out support for Live Photos, so while some Facebook app users ...Thursday December 10, 2015 3:46 pm PST by Husain SumraWhile iPhone 6s and 6s Plus users can share Live Photos with each other through services like iMessage, the hybrid image / video can't be easily shared to social networks. Today, Tumblr updated its iOS app with Live Photos support, making it the first major social network to do so. As TechCrunch notes, Tumblr users tend to upload, share, and re-share GIFs and other kinds of animated images,...Monday October 26, 2015 5:19 pm PDT by Juli CloverJust a day after debuting three new iPhone 6s ads focused on the iPhone's camera and wireless "Hey Siri" functionality, Apple has shared a new short 15-second ad in the same series, this time focusing on Live Photos. In the "Half Court" ad, the iPhone 6s is used to capture a half-court shot made by Golden State Warriors guard Stephen Curry, which is then played back again. The iPhone 6s is...Thursday October 15, 2015 12:33 am PDT by Husain SumraThe new iPhone 6s and 6s Plus allow users to create Live Photos, which capture an additional 3 seconds of video around a still image and play it back when a user 3D Touches the photo. Prime today launched a new app called Live GIF, letting users easily turn their Live Photos into GIFs that are viewable on all devices and the web. When launched, the app automatically detects whether your phone ...Tuesday September 22, 2015 1:03 pm PDT by Juli CloverThe iPhone 6s and 6s Plus include several new camera features that have been highly popular in reviews thus far, but there's also a fantastic update to the way photos are displayed on the two devices. With Live Photos, exclusive to the iPhone 6s and 6s Plus, a bit of motion is captured alongside each photo, enabling short animations that bring each image to life. To enable Live Photos, the...Friday September 11, 2015 12:17 am PDT by Arnold KimOne of the novel new features coming in the iPhone 6s is the new Live Photos feature which captures an additional 3 seconds of video surrounding photos on the new iPhones. The new feature is on by default and allows you to take photos as usual. Apple describes it:A still photo captures an instant frozen in time. With Live Photos, you can turn those instants into unforgettable living memories. At ... Newer PostsOlder Posts By now, you likely know that the camera on your iPhone 6s and 6s Plus can capture Live Photos — still images with a few seconds of audio and video included. What you may not know, though, is what you can do with Live Photos once you've taken one.You can share them with other iPhone users running iOS 9 via Messages as well as through the Photos app on Macs running OS X El Capitan. Facebook and Tumblr have also added support for Live Photos. But you take special Live Photos you want to keep close at hand and turn them into wallpapers for your iPhone.MORE: How to Shoot Live Photos on an iPhoneApple already provides nine free live wallpapers as options. You'll find them by going to the Settings app and tapping Wallpaper. From there, select Choose Wallpaper followed by Live to see Apple's selections. Having a Live Photo as the wallpaper for your Lock Screen brings dynamic movement when you press down on the iPhone's screen, which can add some personality to your phone.If you'd prefer one of your original Live Photos to be your wallpaper, here's what to do.1. Launch Settings.2. Tap Wallpaper.3. Select Choose a New Wallpaper.4. Tap Camera Roll to access the Live Photo you want to set as your wallpaper.5. Select the photo. By default, it will be set as a Live Photo, but you can also opt to make it a still shot from the menu at the bottom of the screen.6. Press down on the screen. You'll see how the photo will look when it animates.7. Tap Set and choose Lock Screen, Home Screen or Both.The next time you switch on your phone, you'll view your own animated wallpaper with a simple press and hold. Tired of your still desktop background? You can liven things up by setting a live wallpaper or animated desktop background. Unfortunately, there's no native way to do this in Windows 11, but there's a handy third-party app you can use. Download Lively Wallpaper From the Microsoft Store You can set a live desktop background in Windows 11, but to do so, you'll need to use a third-party application. Warning: There are many apps out there that claim to live up to the task at hand, but beware of downloading third-party apps unless you know and trust the developers. Many of these apps may contain viruses that infect your computer. RELATED: How to Remove Viruses and Malware on Your Windows PC Our recommended app is Lively Wallpaper, a free and open-source app. You can download Lively Wallpaper from the Microsoft Store. To get this app, click the Windows Search icon in the taskbar, type "Microsoft Store" in the Search box, and then select Microsoft Store from the search results. In Microsoft Store, type "Lively Wallpaper" in the Search bar and then choose the Lively Wallpaper app from the search results. Next, you'll see some information about the application. Click "Get" to the right of this info. Once selected, Lively Wallpaper will begin downloading. After it's installed, you can search for it using Windows Search. Click Lively Wallpaper from the search results to launch the app. RELATED: Windows 11 Gets PowerToys App in Microsoft's New Store Select a Live Wallpaper From Lively Wallpaper's Library Lively Wallpaper comes equipped with several live wallpapers for you to choose from. To use one, simply open the app and then select the one you want from the library. In this example, we'll choose Parallax.js. That's all there is to it. The live wallpaper is now set. Set a Custom Video, YouTube Video, or GIF as a Wallpaper If you don't find a wallpaper you like from Lively Wallpaper's library, you can set your own using a video or GIF on your PC, or even using a YouTube video. To get started, open the app and then click the Plus (+) icon in the left-hand pane. On the next screen, if you want to choose a video or GIF from your PC, click "Browse" under Select File. File Explorer will open. Locate the video or GIF you want to use, select it, and then click "Open." Or, if you want to use a YouTube video, enter the URL of the YouTube video in the "Enter URL" text box and then click the right arrow button. Whether you chose a local video or GIF, or a YouTube video, it will appear in the app's library. Click the Library button (three books) in the left-hand pane, and then choose the newly uploaded video or GIF. Once selected, it will appear as your desktop background. RELATED: How to Change Themes on Windows 11 Set a Live Wallpaper on Multiple Monitors If you're using multiple monitors, you may notice that the wallpaper you selected is only applied to one screen. To set the live wallpaper on other monitors, open the app and click the Control Panel (monitor) icon in the top-right corner of the window. The app's Control Panel will appear. The default placement method is "Selected Screen Only," which means that the wallpaper you select will only be displayed on the selected screen. To set a wallpaper on the other screen, select it in the Choose Display group. Once selected, go back to the app's library and choose the wallpaper you want to place on the other screen. RELATED: How to Set Different Wallpapers for Virtual Desktops on Windows 11 You can also change the placement method of the selected wallpaper. That is, you can choose to make the selected wallpaper stretch across all screens or duplicate the same wallpaper on each screen. Just click the bubble next to the option you want to use. Close Lively Wallpaper If you decide you want to stop using the live wallpaper you set using Lively Wallpaper, open the app and then click the Control Panel (monitor) icon in the top-right corner of the window. In the app's Control Panel, click "Close Wallpapers" in the bottom-right corner of the window. The wallpaper will be removed. Not interested in using a third-party app? While there's no native way to use live wallpapers with Windows 11, Microsoft did a great job providing a ton of beautiful wallpapers for its OS—and changing the desktop background is easy.
